Applicant's election of a method of preparing a hybridoma in the reply filed on 7/10/06 is acknowledged. Because applicant did not distinctly and specifically point out any errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim 76 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a container containing perforations, does not reasonably provide enablement for any container. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. On page 4 lines 12-15 applicants disclose the above cited container. No others are specified.

Claim 76 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Nowhere in the specification do applicants disclose the phrase "means for limiting the passive diffusion of molecules out of said device without limiting the active movement of immune cells into or out of said device".

No claims allowed.
